Product Description

Kayo eKMB Electric Bike

ADDITIONAL FEATURES

The EKMB was designed to be the ultimate beginner bike aimed at kids who are just starting their two-wheeled journey. The low seat height of 21.25 inches and light weight design help inspire confidence as they begin to progress. Speed settings can be adjusted on the fly and have a parental lock to make sure they don't advance through the speed settings without the approval of Mom and Dad. Disc brakes give this bike more than enough stopping power and even limit throttle input while under braking. Each unit comes with three full graphic kits, orange, green, and pink to help customize it. You can expect run times to last up to 70 minutes, when you are done, just stick it back on the charger and let it recharge. No more dirty air filters, carb adjustments, and oil changes. More riding, less maintenance!
