Product Description

Kayo S350 UTV

The S350 uses a 326.7cc four-valve engine with liquid cooling and electronic fuel injection. This means it starts reliably and runs at the right temperature, even when you're pushing it hard. The CVT transmission has three positions: Drive, Neutral, and Reverse. Shaft drive delivers power to the wheels without the chain maintenance other UTVs require.

Dual A-arm suspension absorbs trail impacts. Hydraulic disc brakes on all four wheels stop the machine when you press the pedal. At 853 pounds with a 76.2-inch wheelbase, the S350 stays planted on uneven ground.
